

CONSTRUCTION AND COMMISSIONING

- ✓ BROWNFIELD WORKS
- ✓ GREENFIELD DELIVERY
- ✓ COMMISSIONING

Australian Power Industry Partners deliver 'turn-key' high voltage transmission and distribution electrical solutions.

DELIVERING SAFE AND RELIABLE CONSTRUCTION AND COMMISSIONING SERVICES

Australian Power Industry Partners (APIP) are high voltage electrical Transmission and Distribution specialists.

APIP delivers fully integrated, cost effective field works programs for a range of equipment including:

- Overhead and underground power lines and cables;
- Substations and switchyards;
- HV supporting infrastructure;
- Automation, protection, measurement equipment; and
- Communications and control.

Our industry expertise and highly skilled workforce are uniquely qualified to work with the electrical network and asset owners.

APIP's strength is in the construction of high voltage assets. Early engagement enables the entire life cycle to be considered in the development of optimal energy network solutions.

With a focus on transmission and distribution assets, APIP provide uncompromising quality in the delivery of high voltage construction services.

APIP construction teams deliver transmission and distribution refurbishment and replacement brownfield works, in addition to greenfield construction projects.

Drawing upon our extensive experience and specialist industry knowledge, APIP effectively deliver HV project works in a timely manner without impediment.

Quality, Health and Safety, and Environmental Management are all integral parts of APIP's works delivery.

GREENFIELD DELIVERY

Australian Power Industry Partners deliver Greenfield projects in partnership with preferred suppliers and associates.

Projects are delivered safely, without environmental impact, within budget, on time and to technical specifications.

APIP's early involvement in Greenfield projects enables APIP to tailor a unique solution for the projects scale and budget.

APIP works closely with our valued clients during all phases of delivery. We know the importance of ensuring HV assets meet specified operational requirements.

APIP's project management systems are integrated into the fabric of the company's operating systems – a set of robust processes that are certified against:

- AS/NZS ISO 9001:2008;
- AS/NZS 4801:2001; and
- AS/NZS ISO 14001:2004.

With the project management systems, equipment and qualified resources to deliver HV electrical projects, APIP can successfully deliver your next project.

INDUSTRY TRAINED AND LICENSED ELECTRICAL WORKERS

BROWNFIELD WORKS

Australian Power Industry Partners manage and deliver Modifications, Upgrades and Replacements of in-service HV operational assets.

Interfacing with and managing all works associated with in-service assets is stringently controlled and managed in line with relevant legislation and the asset owners requirements.

APIP personal delivering brownfield works are industry trained and licensed electrical workers qualified for authorisation by the asset owner to undertake works on electrically connected assets.

Our resources have years of in-house power industry experience to deliver uncompromising quality in the delivery of safe, cost effective and environmentally sound brownfield services.

COMMISSIONING

Australian Power Industry Partners deliver rigorous asset commissioning services underpinned by our quality assured project management system.

Site acceptance, pre-commissioning and asset commissioning plans are customised for each unique project, taking into consideration the network design and equipment installed.

In collaboration with our clients, test plans are prepared with network outage requirements identified.

Contingency planning is performed due to the essential nature of the electricity supply networks. We work with our clients to minimise network outage risks to the electrical supply.
